

Automated Dosing Pump & Controller

Fully automated dosing pump and controller fits onto a 25 litre container of bacterial treatment additive for metered dosing directly into the treatment system or greasetraps. Pump is a low maintenance self priming peristaltic type.

Suitable for commercial wastewater treatment systems and commercial greasetraps in restaurants, food courts, hotels, pump-stations etc.

Guaranteed Metered Dosing 24/7

Controller is 240 volts, 7 day fully programmable (45 program settings) with battery backup. Programs can be changed to suit different applications, changing loads or circumstances.

Commercial 25 litre packs of Waste Treatment & Grease Trap Treatment Additives

Our Dosing pump and Controller units are designed to fit over the top of our standard 25 litre bulk pack treatment additives.

Give the contents of the drum a gentle mixing before fitting the pump and controller over the drum.

The suction line goes in to the top of the drum and the delivery line feeds into the tank or grease trap.

Plug the unit in, check the program is set and away it goes. The pump is self priming and needs no further attention. To ensure the contents of the drum remain mixed, once a week turn off the pump, lift the pump and controller off the drum and gently mix the contents of the drum. Refit the pump and controller to the drum. Plug the pump back in again.

Cost Effective, Efficient & Convenient!
